General Information

Power Rails	Description
+12V +12V _{DC}	Main power rail from external 200w power brick.
Vdrive +12V _{DC}	Switched power for LED strips.
VCC +5V _{DC}	5v supply for internal digital circuitry and LCD screen.
VAA+3.3V _{DC}	3.3v supply for the audio ADC and analog front end.
VDD+3.3V _{DC}	Main digital supply.
VDDA+3.3V _{DC}	Filtered analog supply, used for the current monitors and STM32 ADCs.
Audio	Description
XLR-REF	A line level balanced audio input.
1/4" Jack	Also a balanced input, requiring the correct wiring configuration.

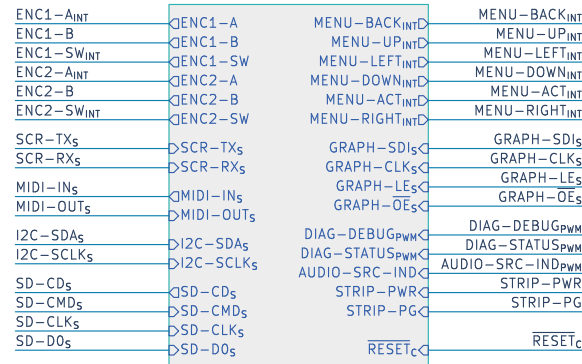

Suffix Legend

S	Serial communication lines
A	Raw analog signal lines
PWM	Pulse Width Modulation lines
INT	Interrupt lines
C	Global control lines or configuration signals
D	Debug lines

RGB STRIP SAFETY LOCKOUT

Uses new 12V 196W power supply. N-Ch MOSFET (Q1) is used to cut or supply power to all the LED strips.
